Lecture 0. 14.1.2014.

M3PM16/M4PM16 ANALYTIC NUMBER THEORY

Professor N. H. BINGHAM, Spring 2014

6M47; 020-7594 2085; n.bingham@ic.ac.uk

Tuesdays 5-6 and Fridays 9-10 and 5-6, 340

Course website: My homepage, link to M3PM16

Office hour, Fridays 4-5

Recommended student text:

Course Outline (33 lectures, 11 weeks, 3 lectures pw)

I. Preliminaries [5 lectures]
1. Primes [L1]
2. Limits of holomorphic functions [L2]
3. Abel (= partial) summation [L2-3]
4. The integral test and Euler's constant [L3]
5. Infinite products [L4]
6. The Riemann-Lebesgue Lemma [L4]
7. The Gamma function [L5]
8. Euler's summation formula [L5]

II. Arithmetic functions and Dirichlet series [9 lectures]
1. Dirichlet series [L6]
2. The Riemann zeta function $\zeta(s)$ [L7]
3. Holomorphy [L8]
4. Convolutions [L8-9]
5. Euler products [L9-10]
6. The Möbius function μ [L10-11]
7. More special Dirichlet series. The von Mangoldt function Λ [L11-12]
8. Mertens' theorems [L12-14]
9. Dirichlet's Hyperbola Identity [L14]

III. The Prime Number Theorem (PNT) and its relatives [19 lectures]
1. PNT [L15]
2. Chebyshev's theorems [L16-18]
3. Analytic continuation of ζ [L19]
4. Non-vanishing on the 1-line: $\zeta(1+it) \neq 0$ [L20]
5. Newman's theorem [L21-23]
6. Proof of PNT [L23]
7. The functional equation for the Riemann zeta function [L23-4]
8. Perron's formula [L25-27]
9. Distribution of Zeros [L27-28]
10. The zero-free region [L28-29]
11. Bounds for ζ'/ζ [L29-30]
12. Proof of PNT with Remainder [L31]
13. Further results [L32-33]
Dramatis Personae: Who did what when

Exam and Coursework. The exam will be in standard format for M3PM/M4PM courses (4 questions, 20 marks each); similarly for the Assessed Coursework and Mastery Question.
Website. I shall set Problems and Solutions weekly, and post them on the website. As with M2PM3: lectures will be delivered on the whiteboard, but lecture notes in TeX will appear on the website.

This year. All the 2013 material is on the website (link to 'Last year's course'); the 2014 material will go up as delivered.

The course was re-introduced in 2012 (after a long gap); I then followed Ch. 1-3 of Jameson's book closely, proving PNT twice, without remainder term. In 2013 I proved PNT once without remainder (by the Wiener-Ikehara theorem and Fourier Analysis) and once with (by Complex Analysis). This year, I again prove PNT once without remainder term (by Newman's method), and once with. We follow 2013 for L1-20, but then diverge.

NHB, 14.2.2013
